# iShower Application User Interface

Launch Screen

The launch screen remains on the screen for approximately 5 seconds as the app launches, and welcomes users to the app.
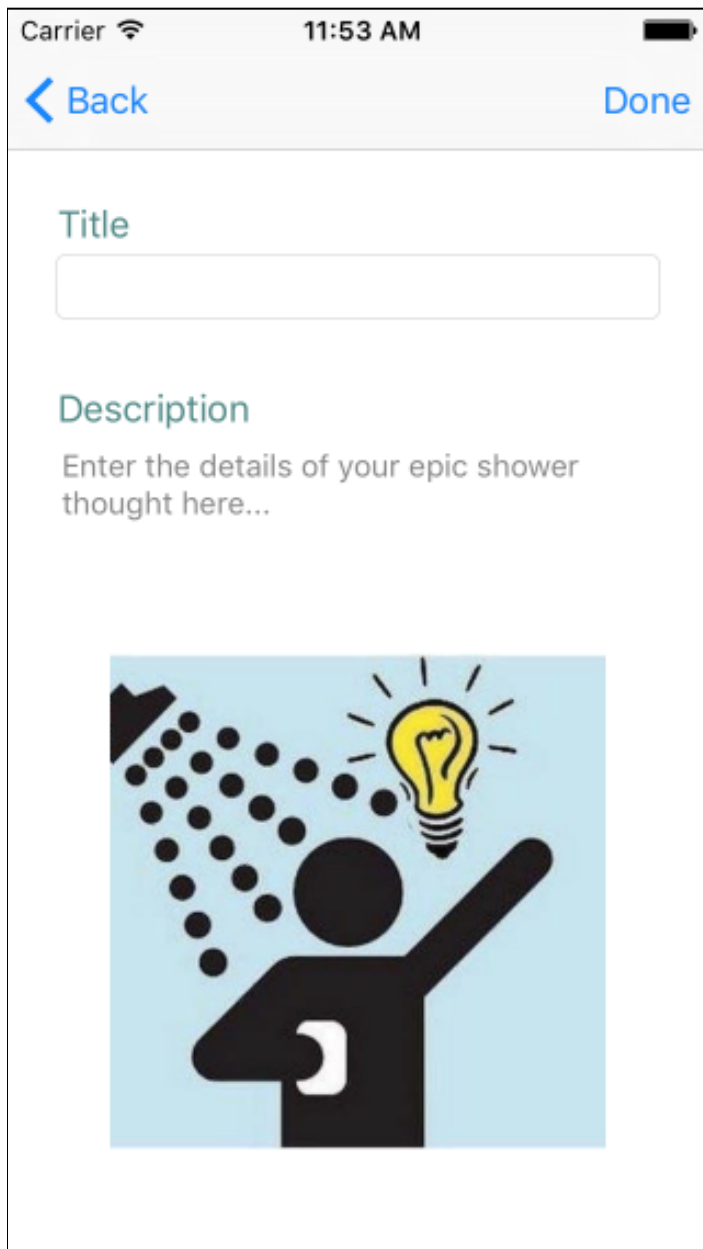

Thoughts Library

The thoughts library is the main page of the application, which displays the titles of each individual shower thought and a preview of its description.

This features utilizes the table view controller provided by the X-Code IDE.

Users may select the "+" button in the top right corner to add additional shower thoughts.

Pre-existing thoughts may be deleted by swiping across, revealing a delete option.

New Thought Page

The new thought page is where users can enter their exciting new shower thoughts into the app.

The application allows users to provide a title to their thought, and a description if they desire.

Once completed, the user will press the "done" button in the top right of the screen.

A pop-up notification will appear, alerting the user that their thought has been successfully added, and commending them on such a terrific new idea.

The new idea they entered will now be accessible via the thoughts library page.
